

CS & IT ENGINEERING

Algorithms

Graph Algorithms

Lecture No.- 03

By- Aditya sir

Recap of Previous Lecture

Topic

DFS on Directed graphs

Topic

DAG

Topics to be Covered

Topic

Application of DFS & BFS

Topic

DFS:
Connected components

ABOUT ME

Hello, I'm Aditya.

1. Represented college as the first Google DSC Ambassador.
2. The only student from the batch to secure an internship at Amazon.
3. Appeared for GATE during BTech and secured AIR 60 in GATE in very first attempt
- City topper
4. Had offer from IIT Bombay and IISc Bangalore to join the Masters program
5. Joined IIT Bombay for my 2 year Masters program in Data Science
6. Published multiple research papers in well known conferences along with the team
7. Received the prestigious excellence in Research award from IIT Bombay for my Masters thesis
8. Completed my Masters with an overall GPA of 9.36/10. Joined Dream11 as a Data Scientist.
9. Have mentored around 10k working professionals in field of Data Science and Analytics
10. Have been mentoring GATE aspirants to secure a great rank in limited time.
11. Have got around 27.5K followers on LinkedIn where I share my insights and guide students and professionals.

By- Aditya sir

Topic : Graph Algorithms

Time complexity:-

1. Time complexity of both DFS & BFS depends on how the graph is represented.

(a) Adjacency matrix: $O(n^2)$

(b) Adjacency list: $O(n + e)$

n = number of vertices

e = number of edges

Topic : Graph Algorithms

Application of DFS and BFS:

1. Both DFS and BFS can be used to determine whether the graph is connected or disconnected.
2. Both **D**FS BFS can be ^{used}~~need~~ to check/ detect whether the two vertices u and v connected or not.
3. Cycle detection: Both DFS and BFS can be used to detect the presence of a cycle in the given graph.

Topic : Graph Algorithms

4. DFS can also be used to determine:

- (a) Connected components in a graph $\rightarrow$ [undirected graph] $\rightarrow$ CC
- (b) Strongly connected components $\rightarrow$ [directed graphs] $\rightarrow$ SCC
- (c) Bi-connected components (BCC)
- (d) Articulation points/cut vertex.

Properties

Topic : Graph Algorithms

1. Connected components (CC) → [undirected graphs]

★ Maximal subgraph that is connected.

Given: $G(V,E)$

3 connected components

Topic : Graph Algorithms

E.g. 2.

$G(V,E)$

3 connected components

Single vertex can also be connected components

Topic : Graph Algorithms

2. Strongly connected components (SCC) $\rightarrow$ Directed Graph

V = [set of all vertices in G]

Definition:-

- Two nodes ^u~~u~~ and 'v' of directed graph are connected, if there is a path from ~~u~~ to 'v' and there is also a path 'v' to 'u'.
- The relation, partitions the vertex set V into disjoint set which are known as strongly connected components (SCC).

$$S_1 \cap S_2 = \phi$$

Topic : Graph Algorithms

E.g.3. Given: (V, E)

Strongly connected components

CC

$G(V, E)$ maximal subgraph ^{that} is connected

Topic : Graph Algorithms

In above eg. There are 4 strongly connected components.

SCC1	SCC2	SCC3	SCC4
{P,R}	{Q,S}	{T,U}	{v}

'V' $\rightarrow$ {P,Q,R,S,T,U,V}

Combine then you get 'V'

Topic : Graph Algorithms

Validate property:-

Topic : Graph Algorithms

#Q. How many strongly connected components are there in the given graph G?

SSC 1 $\rightarrow \{A, B, E\}$

SSC 2 $\rightarrow \{C, D\}$

SSC 3 $\rightarrow \{F, G\}$

SSC 4 $\rightarrow \{H\}$

'V' = $\{A, B, C, D, E, F, G, H\}$

Disjoint

Topic : Graph Algorithms

Property:-1

DAG

scc?

③

Topic : Graph Algorithms

#Q. How many strongly connected components are present in given graph and what are those?

Topic : Graph Algorithms

SSC $\rightarrow$ CC: Maximal subgraph that is connected

SSC 1 $\rightarrow$ {K}

SSC 2 $\rightarrow$ {L}

SSC 3 $\rightarrow$ {A,B}

SSC 4 $\rightarrow$ {E, F}

SSC 5 $\rightarrow$ {C, D, G, H, I, J}

Disjoint

Combine the get 'v' ✓

Topic : Graph Algorithms

Property:

DAG

Topic : Graph Algorithms

Property-1: Every directed graph is a D.A. G of its strongly connected components.

Property-2 : Let C and C^1 be distinct strongly connected components in directed graph $G = (V, E)$, let $u, v \in C$ and $u^1, v^1 \in C^1$, suppose that there is a path $u \sim u^1$ in G , then there cannot also be a path $v^1 \sim v$ in G .

Property-3: If ' C ' and ' C^1 ' are strongly connected components of G and there is an edge from a node in C to a node in C^1 , then the highest post number in C is bigger than the highest post number in C^1 .

Finishing Time

Finishing time

Topic : Graph Algorithms

Property 2 explanation:

If $u \rightarrow u'$ is a path then there cannot be a path from $v' \rightarrow v$ (otherwise it won't be a DAG and property will be invalid.)

1

Topic : Graph Algorithms

Property-3 explanation:

The highest finishing time of c
be f

The highest finishing time of c^1
be f^1

SSC1

SSC2

$$F > F^1$$

Max among the finishing time
of ~~use~~ the vertices in c

Max among the finishing time
of ~~use~~ the vertices in c^1

all

all

Topic : Graph Algorithms

Example to understand this property -3:

DFS Starting at vertex A.

Topic : Graph Algorithms

SSC 1 $\rightarrow$ SSC2

$\downarrow \quad \downarrow \quad 16 > 12$

16 12

SSC 1 $\rightarrow$ SSC 3: $16 > 11$

SSC 2 $\rightarrow$ SSC 3: $12 > 11$

SSC 3 $\rightarrow$ SSC 4: $11 > 6$

SSC 2 $\rightarrow$ SSC 4: $12 > 6$

Topic : Graph Algorithms

Bonus concept for property-3

If we apply DFS on the ~~SSC~~ DAG, then also property 3 can be validated.
SSC

Given:

Topic : Graph Algorithms

Finishing time

SCC 1 $\rightarrow$ 8

SCC 2 $\rightarrow$ 7

SCC 3 $\rightarrow$ 6

SCC 4 $\rightarrow$ 5

1 $\rightarrow$ 2: 8 > 7

2 $\rightarrow$ 4: 7 > 5

2 $\rightarrow$ 3: 7 > 6

1 $\rightarrow$ 3: 8 > 6

3 $\rightarrow$ 4: 6 > 5

Topic : Graph Algorithms

Articulation point / cut vertex

When do ~~we~~ call a vertex as a cut vertex / articulation point?

Articulation point in a graph is such a vertex, which when removed along with all of its edges from the given graph, will partition the graph into 2 or more non-empty components.

Topic : Graph Algorithms

E.g.4. How many articulation point are there in the below graph? What are those?

Given: $(G(V,E))$

→ 3 articulation points

B, C and F

Topic : Graph Algorithms

- AS 3 Aps not a bi-connected graph:
- How many bi-connected components does it has?

Topic : Graph Algorithms

#Q. How many articulation point and what are these?

3 Articulation Point

C, D, and G

Topic : Graph Algorithms

#Q. How many bi-connected components?

Bi connected graph? → No (3AP)

5 Bi- CC

Topic : Graph Algorithms

#Q. How many ~~Aps~~ ^{APs}? What?

There are 0 articulation point in G.

- As there are 0 Aps in given graph, it is a Bi- Connected graph.
- Only 1 Bi-cc (graph itself)

Topic : Graph Algorithms

Bi- connected components:

A graph is considered to be bi-connected if it does not have any articulation point in it.

Property:

If a graph is not bi-connected then its maximal sub-graph which is bi-connected is a bi-connected component.

Topic : Graph Algorithms

#Q. Given a graph G, H has A articulation point and B bi-connected components then what is the value of $(A)^B$?

HW

Given (V,E)

THANK - YOU
