Recap of Previous Lecture

Topic

Profit Loss

$$\frac{S.P.}{C.P.}$$

Discount?

Topics to be Covered

Topic-1

Mixtures Alligations ✓

Topic-2

Number System (Basics) ✓

[MCQ]

#Q. A man sells an article at a profit of 20%. If he had bought it at 10% less and sold it for Rs. 18 more, he would have gained 40%. Find the cost price of the article.

Assignment

$$\frac{S.P.}{C.P.} = 1.2$$

$$\Rightarrow S.P. = 1.2 C.P.$$

$$\Rightarrow \frac{S.P. + 18}{0.9 C.P.} = 1.4$$

$$\Rightarrow 1.2 C.P. + 18 = 1.4 \times 0.9 C.P.$$

$$\Rightarrow 18 = 1.26 C.P. - 1.2 C.P.$$

$$\therefore 0.06 C.P. = 18$$

$$C.P. = \frac{18}{0.06} = \underline{\underline{300}}$$

[MCQ]

#Q. An article was sold at a profit of 20%. If both cost price and selling price are ₹100 less each, then magnitude of the percentage of profit would have been 4 percentage points more than that in the first case. Then the cost price is

241.

$$\frac{S.P.}{C.P.} = 1.2 \Rightarrow S.P. = 1.2 C.P.$$

Assignment

- A ₹ 500
- B ₹ 600**
- C ₹ 800
- D None of these

$$\frac{S.P. - 100}{C.P. - 100} = 1.24$$

$$1.2 C.P. - 100 = 1.24 C.P. - 124$$

$$\begin{aligned} \Rightarrow 0.04 C.P. &= 24 \\ \therefore C.P. &= \frac{24}{0.04} = 600 \end{aligned}$$

$$\therefore C.P. = 600$$

[MCQ]

#Q. 5kg of ghee was bought by Vinod for ₹300. One kg from spoilt. He sells the remaining in such a way that on the whole he incurs a loss of 10%. At what price per kg does he sell the ghee?

Assignment

A ₹ 46.25

B ₹ 45.70

C ₹ 67.50

D ₹ 46.60

$$C.P = \frac{300}{5} = \underline{60}$$

$$\frac{S.P}{C.P} = 0.9 = \frac{S.P}{60} \times \frac{4}{5}$$

$$\Rightarrow 0.9 = \frac{4S.P}{300}$$

$$\Rightarrow 270 = 4S.P.$$

$$\therefore S.P = \frac{270}{4} = \underline{67.5}$$

Percentages ✓

[MCQ]

#Q. By giving a discount of 25%, a shopkeeper gains 25%. If he gives a discount of 40%, find his gain or loss%.

$$S.P. = 75\% M.P.$$

$$S.P. = 125\% C.P.$$

$$\Rightarrow \frac{75}{100} M.P. = \frac{125}{100} C.P.$$

$$M.P. = \frac{5}{3} C.P.$$

$$\frac{75 \times 60}{100} = C.P.$$

$$\frac{S.P.}{C.P.} = 1.25$$

$$\Rightarrow S.P. = 1.25 C.P.$$

$$60\% M.P. = \frac{60}{100} \times \frac{5}{3} C.P.$$

$$S.P_N = C.P.$$

$$\frac{S.P_N}{C.P} = 1$$

No P No L

$$\checkmark \text{ 107. P.} = \underline{\underline{2100}}$$

$$\text{S.P.} = 275 \checkmark$$

$$- \text{C.P.} = \underline{\underline{260}} \checkmark$$

$$\text{S.P.N} = \underline{\underline{260}} \checkmark$$

[MCQ]

#Q. An alloy A consist of iron & copper in the ratio 5 : 7, whereas alloy B consist iron & copper in the ratio 3 : 1. In what ratio these two alloys are to be mixed to form a new alloy with iron & copper in the ratio 2 : 1?

- A** 5:13
- B** 7:5
- C** 1:3
- D** 3:1

$$\begin{array}{ccc} A & & B \\ \frac{5}{12} & & \frac{3}{4} = \frac{9}{12} \\ \downarrow & & \downarrow \\ \frac{1}{12} & \frac{2}{3} = \frac{8}{12} & \frac{2}{12} \end{array}$$

$$A : B = \frac{1}{12} : \frac{3}{12} = 1 : 3$$

[MCQ]

#Q. How many litres of water must be added to 16 litres milk containing 10% water to dilute it with 20% water?

Assignment

- A** 3 litres
- B** 2 litres
- C** 1 litre
- D** 4 litres

[MCQ]

#Q. A mixture contains milk and water in the ratio 5:1. On adding 5 liters of water, the ratio of milk to water becomes 5:2. the quantity of milk in the mixture earlier was:

Assignment

- A** 16 litres
- B** 25 litres
- C** 32.5 litres
- D** 22.75 litres

[MCQ]

#Q. In what ratio must a grocer mix two varieties of pulses costing ₹15 and ₹20 per kg respectively so as to get a mixture worth ₹16.50 per kg?

Assignment

- A** 3:8
- B** 5:3
- C** 7:3
- D** 4:5

[MCQ]

#Q. In what ratio must Ankit mix two varieties of sugar worth ₹20 per kg and ₹32 per kg so that by selling the mixture at ₹36 per kg he may gain 20%?

Assignment

- A** 1:5
- B** 3:5
- C** 2:3
- D** 3:2
